(54) Title: AN IMPROVED BRIET ASSAY

(57) Abstract: An improved BRIET assay, wherein the BRIET signal is enhanced and/or prolonged. The improved BRIET assay comprises the steps of i) adding a substrate to a cell comprising GPCR-Rluc fusion protein and a β -arrestin-GFP fusion protein, wherein the (β -arrestin is mutated, ii) adding a ligand to obtain, if possible, a GPCR-Rluc/(β -arrestin-GFP complex, and iii) mea-
suring a BRIET signal to obtain a BRIET ratio, wherein the improvement leads to an increased BRIET ratio compared with the ratios obtained by use of the same process employing a β -arrestin-GFP fusion protein wherein the β -arrestin is the wild type β -arrestin, or employing a 13-arrestin-GFP fusion protein, wherein the (β -arrestin is a β -arrestin specifically mutated so that it acts on the receptor independent of the receptors phosphorylation state. The invention further relates to a stable substrate solution for use in an improved BRIET assay.
